PROFESSIONAL SUMMARY

Data and Cloud Engineer with a proven Eagle Scout foundation in leadership and execution, specializing in scalable ETL pipelines, serverless architectures, and real-time data streaming on AWS, Azure, and Go. Designed a custom Kafka connector that cut ingestion latency by 40%, built a serverless AI pipeline handling 1,000+ requests with sub-100ms response times, and developed a secure .NET REST API with JWT authentication and live market data integration designed for Azure deployment. Contributed to an open-source Go CLI tool for cross-platform environment management, adding macOS and WSL2 support. Seeking to apply cloud, data engineering, and systems programming expertise to drive fast and reliable solutions.

EDUCATION

Rutgers University | *Bachelor of Science, Computer Science*

New Brunswick, NJ May 2025

TECHNICAL SKILLS

- **Languages:** Python, Go, C#, Java, HTML, JavaScript, CSS, C/C++
- **Cloud & Data:** AWS (Lambda, API Gateway, DynamoDB, RDS, CloudWatch, Bedrock), Azure, Docker, Apache Kafka, Apache Hadoop, PySpark, MongoDB, SQL, SQLite, ETL, GitHub Actions
- **Frameworks:** React, React Native, Express.js, ASP.NET Core, Entity

Framework CERTIFICATIONS

- AWS Certified AI Practitioner: Amazon Web Services | 2026

EXPERIENCE

Revature | *Software Engineer Trainee Feb 2026 - Apr 2026*

- Built and deployed batch and distributed ETL pipelines using PySpark, Kafka, Hadoop, and AWS EMR, processing large structured datasets and enabling reliable data availability for downstream analytics.
- Developed Python and SQL automation scripts for data querying and transformation, which streamlined workflows and improved reliability of distributed computing tasks.

Xtremeanalytix | *Cloud Engineering Intern Jun 2024 - Aug 2024*

- Designed and deployed five data pipelines across SQL Server, MongoDB, AWS RDS, and Azure SQL in cloud and hybrid environments, accelerating data integration for downstream applications.
- Created a custom MongoDB source connector in Java enabling real-time data streaming into Apache Kafka, reducing data ingestion latency by 40% across 3 cloud-hosted applications.
- Optimized data synchronization across 4+ cloud-native and on-prem systems, improving data accessibility and reducing pipeline errors by 30%.
- Maintained cloud infrastructure on AWS and Azure, supporting fault-tolerant ingestion workflows handling millions of records daily.

TECHNICAL PROJECTS

Serverless AI Text Summarization Pipeline - Sep 2025 - Present

- Architected a production-style serverless AI pipeline using AWS SAM, API Gateway, and AWS Lambda, with results persisted in DynamoDB and all endpoints secured via API key authentication, achieving an average retrieval time of 0.72s.
- Integrated Claude Haiku 4.5 via Amazon Bedrock to automate text summarization and sentiment tagging, reducing long-form text by up to 61% with automated positive/negative/neutral classification applied to every processed document.
- Developed a fully event-driven, auto-scaling system with CloudWatch logging, achieving zero server maintenance overhead and an average end-to-end response time of 1.89s with no infrastructure management required.

Stock Portfolio Tracker API - Mar 2026 - Present

- Built a production-style RESTful API in ASP.NET Core (.NET 10) with Entity Framework Core, exposing 16 JWT-secured endpoints across Auth, Portfolio, Logs, and Admin controllers backed by a SQLite database with BCrypt password hashing.
- Integrated Alpha Vantage for live stock pricing, automatically calculating per-holding gain/loss, cost basis, and total portfolio value; applied 60-second in-memory caching to reduce redundant external API calls by up to 80% under repeated requests.
- Implemented a layered Controller → Service → Data architecture with a dedicated API call logging system across 4 normalized tables, designed for deployment to Azure App Service with Azure SQL via EF Core migration swap.

Genv – Cross-Platform Environment Manager Mar 2026 - Present

- Contributed to an open-source Go CLI tool for declarative cross-platform environment management across macOS, Linux, and WSL2, tracked in a version-controlled genv.json spec file with full CI/CD integration via GitHub Actions.
- Implemented a brew services wrapper for macOS, enabling declarative service lifecycle management (start/stop/status) for Homebrew-managed formulas with schema validation, lock file tracking, and full test coverage across 13 packages.
- Designed and validated WSL2 platform support from scratch, implementing PATH sanitization logic to prevent Windows binaries from shadowing Linux-native package managers; tested on real WSL2 hardware against live Windows /mnt/c/... mount paths, achieving full integration test coverage.

Squirdle – Pokemon Wordle Discord Bot Dec 2025 - Jan 2026

- Built an interactive Pokemon-themed Wordle bot supporting daily and personal game states for 100+ active users, using Python and the Discord API.
- Automated JSON-based data persistence and command optimization, achieving sub-200ms response latency; deployed to Render with UptimeRobot for automated uptime monitoring.

PEAKMODE – AI Health Supplement Recommender App Mar 2025 - May 2025

- Led end-to-end development of a cross-platform mobile app with JWT authentication, SQLite storage, and dark mode support.
- Architected an AI recommendation engine using Bayesian reasoning and informed search, delivering personalized supplement suggestions with confidence scores and a 250ms response time.

LEADERSHIP & COMMUNITY SERVICE

Boy Scouts of America | *Eagle Scouts Jun 2016 - Aug 2021*

- Led and executed multiple community infrastructure projects over 5+ years, including trail restoration, road repair, and manufacturing 100+ face shields for

frontline paramedics during COVID-19, culminating in the Eagle Scout rank earned by fewer than 6% of Scouts.
